

SNEHA SAHA

Java Developer | Spring Boot | React.js | Databases

Kolkata, West Bengal, India / +91 9123822426 | github.com/SnehaSaha14 | sahasneha773@gmail.com

PROFESSIONAL SUMMARY

Results-driven Full-Stack Java Developer with practical expertise in Spring Boot, React.js, and MongoDB. Demonstrated foundation in microservices and system design fundamentals, engineering scalable RESTful architectures, decoupled services, and optimized database schemas. Proven track record across 7+ full-stack and backend projects delivering 99.9% API execution consistency, clean MVC separation, and unit-tested production code.

TECHNICAL SKILLS

Programming Languages: Java (Core & Advanced), JavaScript, Python (Fundamentals), SQL

Full-Stack & Frameworks: React.js, Spring Boot, Spring Data JPA, Hibernate, FastAPI, Servlets, RESTful APIs

Databases & Cloud Storage: MongoDB, MongoDB Atlas, MySQL, DynamoDB

System Architecture: Microservices (Fundamentals), System Design (Fundamentals), Distributed Architecture, MVC, OOP, ACID Transactions, DBMS

Developer Tools & Platforms: Git, GitHub, Postman, Maven, Unix/Linux, Swagger UI, Power BI

TECHNICAL PROJECTS

1) [User Management System](#) – Tech Stack: FastAPI, MongoDB Atlas, Swagger [GitHub Repo](#)

- Developed RESTful CRUD APIs using FastAPI with asynchronous endpoint handling and request validation.
- Integrated MongoDB Atlas for cloud-based document storage and efficient database operations.
- Implemented exception handling and structured API responses to improve backend reliability and debugging.
- Used Swagger UI for API documentation, endpoint testing, and request validation.

2) [Banking System](#) – Tech Stack: Spring Boot (v3.x), Java 21, MySQL, Spring Data JPA (Hibernate) [GitHub Repo](#)

- Engineered high-performance Data Exchange Interfaces for operations like account creation and fund transfers.
- Designed a Normalized Schema in MySQL to ensure data integrity and maintained ACID-compliant logic.
- Optimized CRUD operations and service endpoint performance for high-frequency transactions.
- Conducted exhaustive testing via Postman to ensure seamless system communication.

3) [Expense Tracker](#) – Tech Stack: Spring Boot, Java 17, MySQL, Spring Data JPA (Hibernate) [GitHub Repo](#)

- Built a backend-based expense tracking application with complete CRUD functionality for financial record management.
- Structured the application using layered MVC architecture with separate controller, service, and repository layers.
- Used Spring Data JPA and Hibernate for entity mapping and database interaction with MySQL.
- Implemented centralized exception handling([@ControllerAdvice](#)) to standardize API responses and simplify debugging.

PROFESSIONAL EXPERIENCE

Techno Exponent

Data Analytics Intern

Kolkata, India

Jun 2025 – Sep 2025

- Built interactive Power BI dashboards by transforming and analyzing structured datasets to generate meaningful business insights.
- Filtered and organized complex datasets using Power Query and DAX to create clear visual reports for performance analysis and edge-case identification.

EDUCATION

Bachelor of Computer Applications (BCA) - Expected June 2026 | SGPA: 7.80+

Bengal School of Technology & Management, affiliated with MAKAUT, Kolkata

Aditya Birla Vani Bharati – Class X (WBBSE 76%) & Class XII (CBSE 60%)
